

California Proposition 65 Compliance

Compliance with the Requirements of California Proposition 65

REO AG supports its customers in assessing the requirements of California Proposition 65 (Safe Drinking Water and Toxic Enforcement Act of 1986) for the U.S. market.

As an internationally active manufacturer of high-quality inductive, resistive, and electronic components, we evaluate our products against the substance list published by the California Office of Environmental Health Hazard Assessment (OEHHA) and work closely with our suppliers to provide the necessary information.

Our measures include, in particular:

- Regular review of the current Proposition 65 substance list.
- Assessing our products for the presence of Proposition 65 substances.
- Obtaining and maintaining material declarations from our suppliers.
- Assessing potential exposure during the intended use of our products.
- Continuously monitoring regulatory changes and implementing necessary measures.
- Supporting our customers by providing relevant compliance information.

The presence of a substance listed under Proposition 65 does not automatically trigger a labeling requirement. In general, a warning label is required only if, under the intended conditions of use, exposure exceeding the thresholds set by the OEHHA cannot be ruled out.

Please feel free to contact us for product-specific information or questions regarding material compliance.
