

## PFAS Compliance

### Responsible Handling of PFAS

REO AG monitors the latest regulatory developments regarding per- and polyfluoroalkyl substances (PFAS) and assesses their potential use within our products and supply chains.

As a manufacturer of high-quality inductive, resistive, and electronic components, we place great emphasis on product safety, environmental sustainability, and compliance with all applicable legal requirements. Together with our suppliers, we continuously monitor the materials used and evaluate them with regard to current and future PFAS requirements.

Our measures include, in particular:

- Regular monitoring of national and international PFAS regulations.
- Obtaining and maintaining material declarations from our suppliers.
- Assessing our products for PFAS substances they contain.
- Supporting our suppliers in providing relevant substance information.
- Continuous monitoring of legal developments and implementation of necessary measures.
- Supporting our customers by providing relevant compliance information.

As regulatory requirements regarding PFAS are constantly evolving, REO AG regularly reviews its products and processes and adapts them to new legal requirements as needed.

We are happy to assist you with product-specific information or questions regarding material compliance.
